RISO Introduces the AR8100 Envelope Feeder

RISO, Inc. is proud to announce the release of the new AR8100 Envelope/Card Feeder. The AR8100 retains all of the features of the AR8000 with enhancements that make the unit more user-friendly and increase reliability. Prior enhancements to the AR8000 included:

- New interface harness
- Operation panel clearly marked as to the function of the controls
- New adjustable mounting bracket
- Additional paper detection sensor cover

New enhancements to the AR8100 include:

- Feed area has media separator to fan and direct media toward feed position
- New rubber material for the feed rollers and strippers increases reliability and usage yields
- Transport section lifts for easy jam removal
- Feed section side guides are connected via a belt which ensures proper positioning of media in conjunction with the scale
- Strippers are adjusted simply by lifting a lever, placing media under the stripper and lowering the lever
- Three scales which identify where to position media guides and the transport roller for end-user ease
- One stationary and only one adjustable transport roller with a positioning scale
- Transport area media guides are one unit versus three separate adjustable components. Simply press the Test Mode switch and position the guides according to the media scale

The AR8100 also comes with optional conveyor. We have enclosed a section of the Operator's Manual with photos of the improved feed area.

Just like the AR8000, the AR8100 handles a wide variety of hard-to-feed stocks such as 20-lb envelopes and 110-lb postcard size stock. The AR8100 also handles a wide range of stock sizes from 4" x 6" to 10" x 13. Print all styles of envelopes including commercial, window, invitation, catalog, booklet-style and more. Print many types of cards including invitations, postcards, tickets and more.

The AR8100 also incorporates the continuous top-load, bottom-feed delivery system maximizing productivity by not having to stop to load stock. The optional conveyor catches

printed material for easy assembly and distribution. When not in use, simply roll the envelope feeder away and the Risograph is ready for other jobs. It's that easy!

The AR8100 is compatible with the GR3770 and GR3750. Combine the AR8100 with the RJ1100 and you have a powerful all-in-one, easy-to-use mailing system that can feed, print, address, and bar code your envelopes all in one pass!

Key Features:

- ☞ Handles wide variety of stock sizes from 4" x 6" to 10" x 13"
- ☞ Handles wide range of stock weights from 20-lb envelope to 110-lb postcard size stock
- ☞ Top-load, bottom-feed allows for continuous job run

Key Benefits:

- ☞ Eliminate waste
- ☞ Eliminate storage
- ☞ Reduce costs
- ☞ Maintain control
- ☞ On-demand envelopes
- ☞ Roll away when not in use

The AR8100 is now stocked in ledger size only. Legal size is available on special order, product number S-8987. Please allow ninety (90) days for delivery of legal size unit. The legal size unit is compatible with the GR2750, GR2710, GR1750, and GR1700 Risographs.

Pricing remains the same.
Product Number Ledger Size = S-8985 *(Includes one stand for the AR8100 (S-214AS), and one connection kit (S-212AS, brackets and wiring)*. **Note: Be sure the Risograph is placed on stand #S-8925 for proper alignment to the AR8100.**
